

## Vulcan Productions Scenario

1S07 20:25 Euston to Fort William 05/07/1994

This scenario puts you in charge of the much vaunted Caledonian Sleeper service to Fort William. Booked for a single Class 37/4, 37401 has failed and is going to provide an extra challenge as you haul your train from the suburbs of Glasgow to Fort William.

The journey is scheduled for 4hr05mins, through testing it has been proven to be achievable without speeding, but you'll really need to concentrate on gradients in both directions to achieve this. You'll be travelling as the sun rises and it promises to provide some great sights among some of the UKs most breathtaking scenery to be seen from a railway carriage (if you're awake that is!)

## **Scenario Requirements**

Routes:

[Steam Workshop : West Highland Line Full](#) - see the page for details of DLC requirements for the route.
